
User manual M2

PT100 2-wire -200.0°C...850.0°C

Technical features:

- red display of -19999...99999 digits (optional: green, orange or blue display)
- minimal installation depth: 70 mm without plug-in terminal
- min-/max memory
- display flashing at threshold value exceedance / undercut
- programming interlock via access code
- protection class IP65 at the front
- plug-in terminal
- zero-key for triggering of HOLD, TARA
- permanent min-/max-value recording
- option: analog output
- option: 2 relay outputs (change-over contacts)

Identification

STANDARD-TYPES	ORDER NUMBER
PT100 2-wire Housing size: 96x48 mm	M2-1TR5B.020C.570BD M2-1TR5B.020C.670BD

Options – breakdown of order code:

	M	2-	1	T	R	5	B.	0	2	0	C.	6	7	2	B	D	
Standard type M-Line																	
Installation depth mm 89 mm, incl.plug-in terminal																	Dimension D physical unit
Housing size B96 x H48 x D70 mm																	Version B B
Type of display Temperature																	Setpoint 0 no setpoint 2 2 relay outputs
Display colour Blue Green Red Yellow																	Protection class 1 without keypad, operation at the back 7 IP65/plug-in terminal
Number of digits 5-digit																	Supply voltage 5 230 VAC 6 10-30 VDC galv.insulated
Digit height 14 mm																	Measuring input C PT100 wire 850°C
Digital input without																	Analog output 0 without X 0-10 VDC, 0/4-20 mA
																	Temperature devices 2 PT100-2-wire

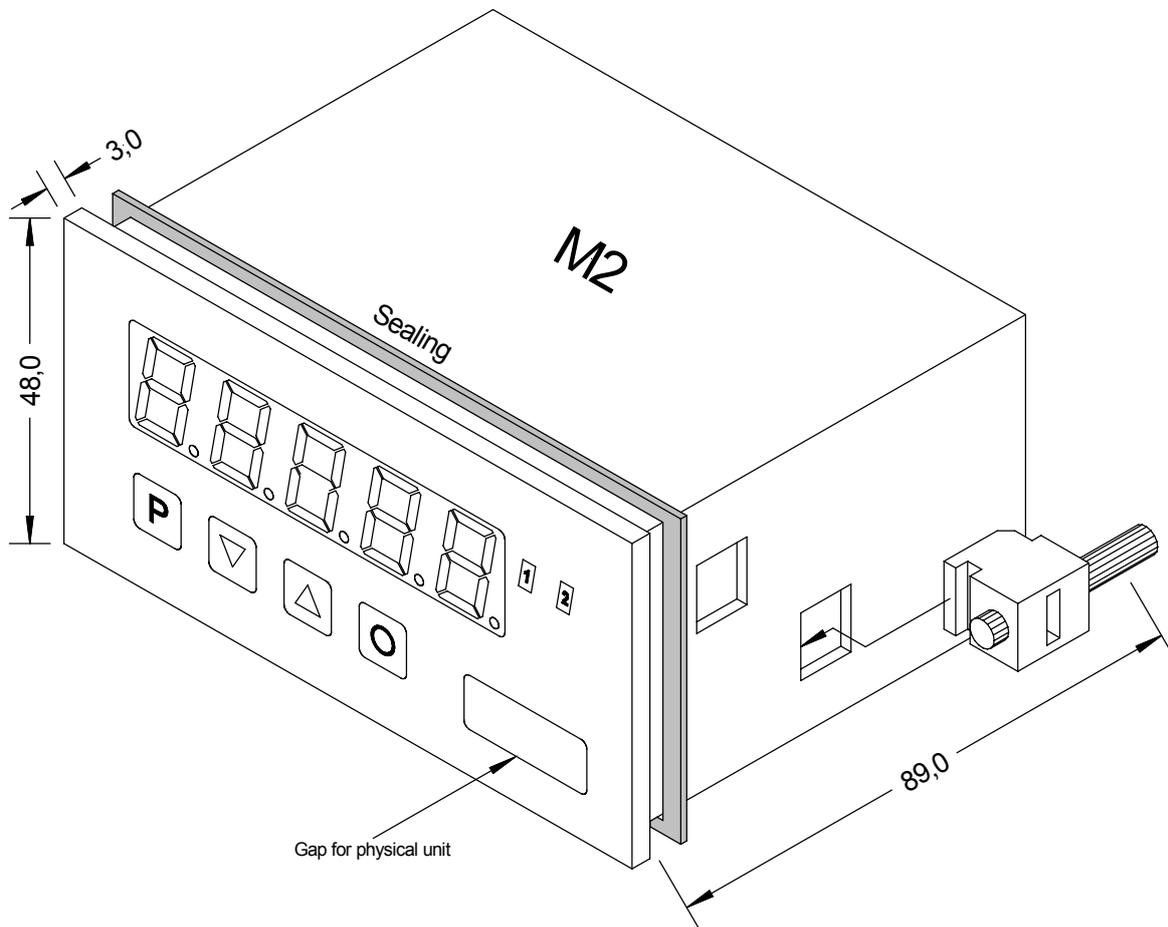

Please state physical unit by order, e.g. m/min.

1. Assembly

Please read the *Safety advice* on page 34 before installation and keep this user manual for future reference.

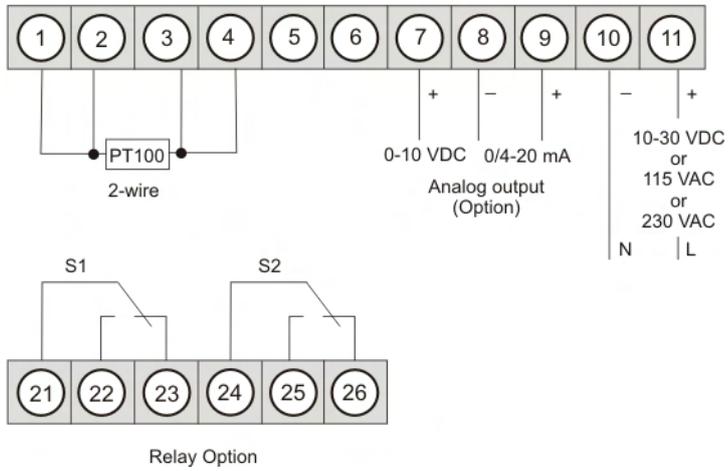

1. After removing the fixing elements, insert the device.
2. Check the seal to make sure it fits securely.
3. Click the fixing elements back into place and tighten the clamping screws by hand. Then use a screwdriver to tighten them another half a turn.

CAUTION! The torque should not exceed 0.1 Nm!

The dimension symbols can be exchanged before installation via a channel on the side!

2. Electrical connection

Type M2-1TR5B.020C.470BD with a supply of 115 VAC
Type M2-1TR5B.020C.570BD with a supply of 230 VAC
Type M2-1TR5B.020C.670BD with a supply of 10-30 VDC

3. Function and operation description

Operation

The operation is divided into three different levels.

Menu level (delivery status)

This level is for the standard settings of the device. Only menu items which are sufficient to set the device into operation are displayed. To get into the professional level, run through the menu level and parameterise "*PROF*" under menu item *RUN*.

Menu group level (complete function volume)

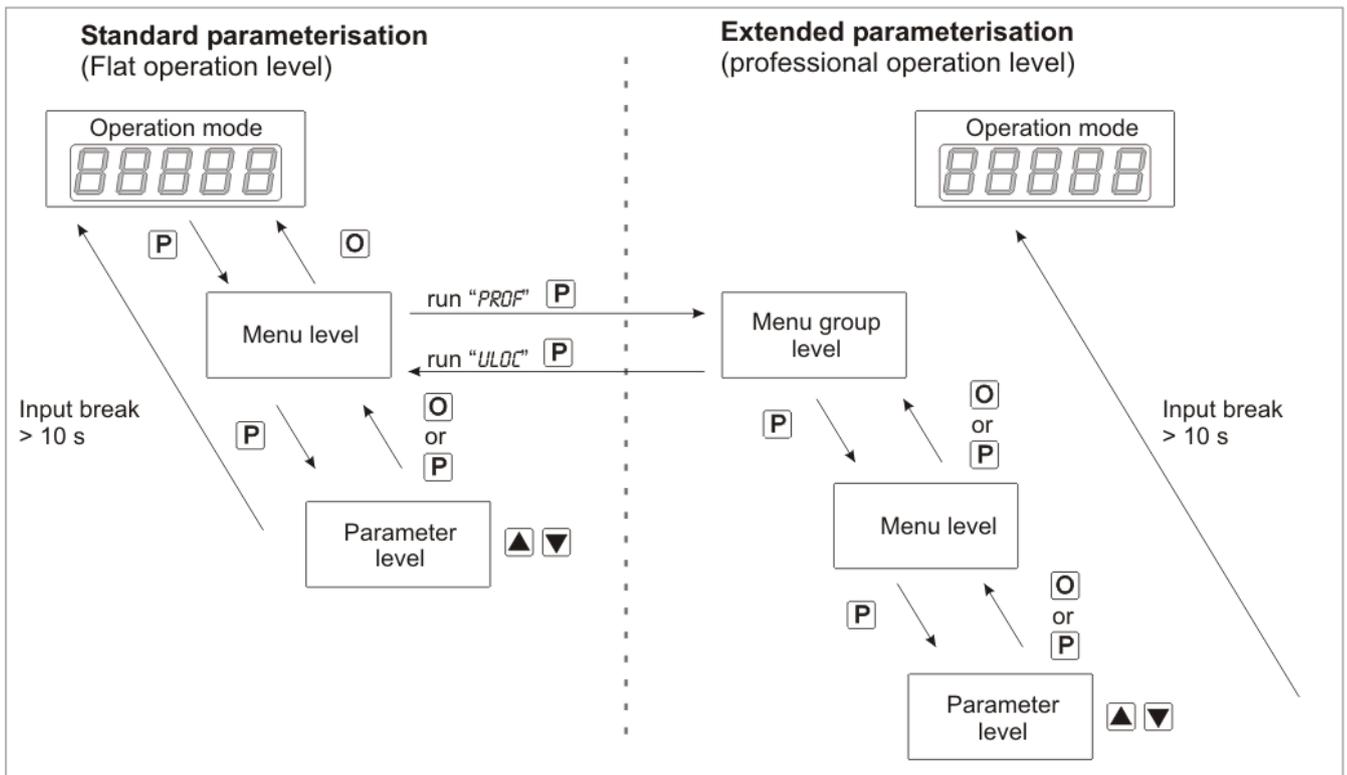

Suited for complex applications as e.g. linkage of alarms, setpoint treatment, totaliser function etc. In this level function groups which allow an extended parameterisation of the standard settings are available. To leave the menu group level, run through this level and parameterise „*ULOC*„ under menu item *RUN*.

Parameterisation level:

Parameters deposited in the menu item can here be parameterised. Functions, that can be changed or adjusted, are always signalled by a flashing of the display. Settings that are made in the parameterisation level are confirmed with **[P]** and thus safed. By pressing the **[O]**-key (zero-key) it leads to a break-off of the value input and to a change into the menu level. All adjustments are safed automatically by the device and changes into operating mode, if no further key operation is done within the next 10 seconds.

Level	Key	Description
Menu level		Change to parameterisation level and deposited values.
	 	Keys for up and down navigation in the menu level.
		Change into operation mode.
Parameterisation level		To confirm the changes made at the parameterization level.
	 	Adjustment of the value / the setting.
		Change into menu level or break-off in value input.
Menu group level		Change to menu level.
	 	Keys for up and down navigation in the menu group level.
		Change into operation mode or back into menu level.

Function chart :

Underline:

- P** Takeover
- O** Stop
- ▲** Value selection (+)
- ▼** Value selection (-)

4. Setting up the device

4.1. Switching-on

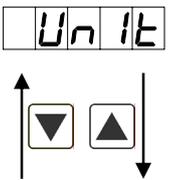

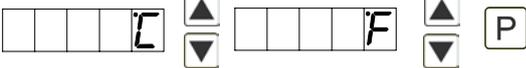

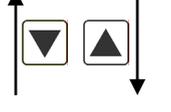

Once the installation is complete, you can start the device by applying the voltage supply. Before, check once again that all electrical connections are correct.

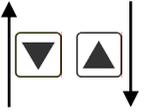

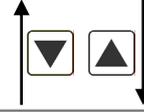

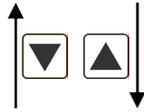

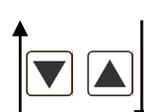

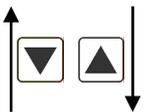

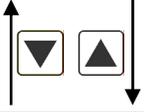

Starting sequence

For 1 second during the switching-on process, the segment test (**B B B B B**) is displayed, followed by an indication of the software type and, after that, also for 1 second, the software version. After the starting sequence, the device switches to operation/display mode.

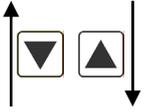

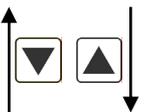

4.2. Standard parameterisation: (flat operation level)

To parameterize the display, press the **[P]** key in operating mode for 1 second. The display then changes to the menu level with the first menu item *TYPE*.

Menu level	Parameterisation level
	<p>Type of temperature measurement, UNIT:</p>  <p>Select between °C and °F to display the temperature. Confirm the selection with [P] and the display switches back to menu level.</p>
	<p>Setting the decimal point / physical unit, DOT:</p>  <p>The decimal point and the physical unit of the device can be adjusted with [▼] [▲]. If e.g. temperature measurement is selected in °C, one can select 0°C respectively 0.0°C in the parameterisation level. Confirm the selection with [P] and the display switches back to menu level.</p>
	<p>Impedance matching, OFFS:</p>  <p>The value for the sensor calibration is aligned from the smallest to the highest digit [▼] [▲] and confirmed digit per digit with [P]. After the last digit, the device changes back into menu level. During a temperature measurement in °C the value calibration can be adjusted between -20.0 and +20.0 and can be set during a measurement in °F between -36.0 and +36.0. If the measurement is switched later on, the value is rounded.</p>

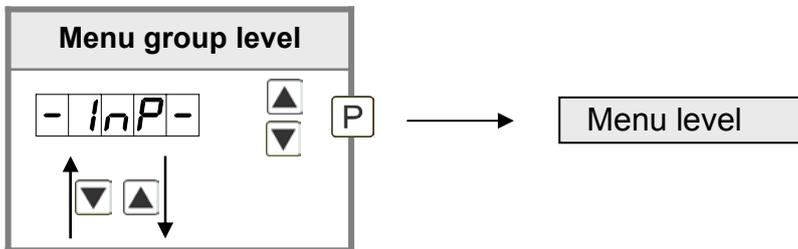

Menu level	Parameterisation level
	<p>Setting up the test time, SEC:</p> <p>  </p> <p>The test time is adjusted with [▲] [▼]. Thereby the display moves up in increments of 0.1 sec up to 1 sec and in increments of 1.0 sec up to 10.0 sec. Confirm the selection with [P] and the display switches back to menu level.</p>
	<p>Selection of analog output, OUT.RA:</p> <p>  </p> <p>Three output signals are available: 0-10 VDC, 0-20 mA and 4-20 mA, with this function, the demanded signal is selected.</p>
	<p>Setting up the final value of the analog output, OUT.EN:</p> <p>  </p> <p>The final value is adjusted from the smallest digit to the highest digit with [▲] [▼] and digit by digit confirmed with [P]. A minus sign can only be parametrised on the highest digit. After the last digit, the device changes back into menu level.</p>
	<p>Setting up the initial value of the analog output, OUT.OF:</p> <p>  </p> <p>The final value is adjusted from the smallest digit to the highest digit with [▲] [▼] and digit by digit confirmed with [P]. A minus sign can only be parametrised on the highest digit. After the last digit, the device changes back into menu level.</p>
	<p>Threshold values / limit values, LI-1:</p> <p>  </p> <p>For both limit values, two different values can be parameterized. With this, the parameters for each limit value are called up one after another.</p>
	<p>Hysteresis for limit values, HY-1:</p> <p>  </p> <p>For all limit values exists a hysteresis function, that reacts according to the settings (threshold exceedance / threshold undercut).</p>

Menu level	Parameterisation level
<p>Function if display falls below / exceeds limit value, FU-1:</p> <p>FU-1 P HIGH  LOW  P</p> <p> </p>	<p>Function if display falls below / exceeds limit value, FU-1:</p> <p>The limit value undercut can be selected with LOW (LOW = lower limit value) and limit value exceedance can be selected with HIGH (HIGH = upper limit value). If e.g. limit value 1 is on a switching threshold of 100 and occupied with function „HIGH“, the alarm will be activated by reaching the threshold. If the limit value is allocated to „LOW“, an alarm will be activated by undercut of the threshold.</p>
<p>Threshold values / limit values, LI-2:</p> <p>LI-2 P 0 P 0 P 0 P 0 P 0  P</p> <p> </p>	<p>Threshold values / limit values, LI-2:</p> <p>For both limit values, two different values can be parameterized. With this, the parameters for each limit value are called up one after another.</p>
<p>Hysteresis for limit values, HY-2:</p> <p>HY-2 P 0 P 0 P 0 P 0 P 0  P</p> <p> </p>	<p>Hysteresis for limit values, HY-2:</p> <p>For all limit values exists a hysteresis function, that reacts according to the settings (threshold exceedance / threshold undercut).</p>
<p>Function if display falls below / exceeds limit value, FU-2:</p> <p>FU-2 P HIGH  LOW  P</p> <p> </p>	<p>Function if display falls below / exceeds limit value, FU-2:</p> <p>A limit value undercut is selected with LOW (for LOW = lower limit value), a limit value exceedance with HIGH (for HIGH = higher limit value). If e.g. limit value 1 is on a threshold level of 100 and allocated with function HIGH, an alarm is activated by reaching of the threshold level. By allocation of limit value LOW, an alarm is activated by falling below the threshold value.</p>
<p>User code (4-digit number-combination, free available), U.CODE:</p> <p>U.CodE P 8 P 8 P 8 P 8  P</p> <p> </p>	<p>User code (4-digit number-combination, free available), U.CODE:</p> <p>If this code is set, the user can only choose from a reduced number of parameter sets. He has e.g. no access to the scale of the measuring inputs. Still, a changing of the limit values and the allocation of the analog output are allowed. This reduced parameterisation is activated by selecting LOC in menu item RUN. The device confirms the setting with „- - -“, and changes into operation mode. By pressing [P] for 3 seconds in operation mode, the display shows CODE and thus confirms the change into the reduced parameterisation. It stays activated as long as the standard parameterisation is activated again by the input of A.CODE (master code).</p>

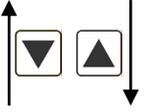

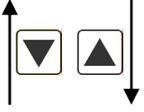

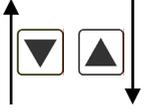

Menu level	Parameterisation level
	<p>Master code (4-digit number-combination free available), <i>A.CODE</i>:</p> <p><i>A.CodE</i> [P] <i>8</i> [P] <i>8</i> [P] <i>8</i> [P] <i>8</i> [▲] [▼] [P]</p> <p>No parameterisation is allowed if this code is set. This function is activated by selecting <i>LOC</i> in menu item <i>RUN</i>. The device confirms the setting with „- - - -“, and changes into operation mode. By pressing [P] for 3 seconds in operation mode, the display shows <i>CODE</i> and thus confirms the activation of the master code. The user can only come to the parameterisation by the correct input of the number-combination. It stays activated as long as <i>ULOC</i> is entered in menu group <i>RUN</i>, this sets the device back into standard parameterisation.</p>
	<p>Activation / deactivation of the programming lock or completion of the standard parameterization with change into menu group level (complete function range), <i>RUN</i>:</p> <p><i>run</i> [P] <i>ULOC</i> [▲] [▼] <i>LOC</i> [▲] [▼] <i>PROF</i> [P]</p> <p>With the navigation keys [▲] [▼], you can choose between the deactivated key lock <i>ULOC</i> (works setting) and the activated key lock <i>LOC</i>, or the menu group level <i>PROF</i>. Confirm the selection with [P]. After this, the display confirms the settings with „- - - -“, and automatically switches to operating mode. If <i>LOC</i> was selected, the keyboard is locked. To get back into the menu level, press [P] for 3 seconds in operating mode. Now enter the <i>CODE</i> (works setting <i>1 2 3 4</i>) that appears using [▲] [▼] plus [P] to unlock the keyboard. <i>FAIL</i> appears if the input is wrong.</p> <p>To parametrise further functions <i>PROF</i> needs to be set. The device confirms this setting with „- - - -“, and changes automatically in operation mode. By pressing [P] for approx. 3 seconds in operation mode, the first menu group <i>INP</i> is shown in the display and thus confirms the change into the extended parameterisation. It stays activated as long as <i>ULOC</i> is entered in menu group <i>RUN</i>, thus the display is set back in standard parameterisation again.</p>

4.3. Extended parameterisation (professional operation level)

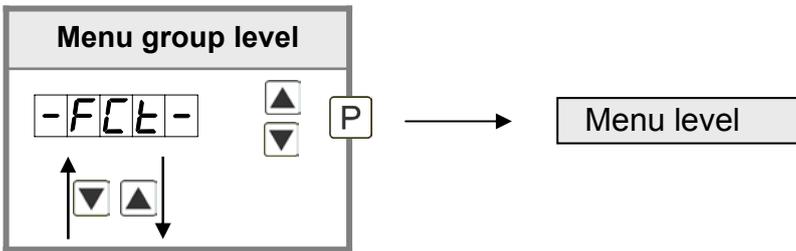

4.3.1. Signal input parameters

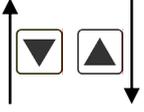

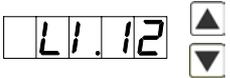

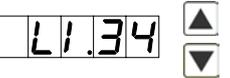

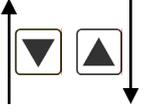

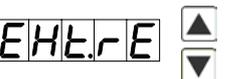

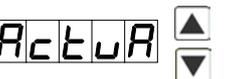

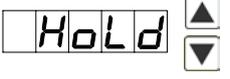

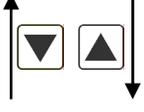

Menu level	Parameterisation level
	<p>Type of temperature measurement <i>UNIT</i>:</p> <p>Select between °C and °F to display the temperature. Confirm the selection with [P] and the display switches back to menu level.</p>
	<p>Setting the decimal point / comma, <i>DOT</i>:</p> <p>The decimal place and the physical unit of the device can be adjusted with [▼] [▲]. If e.g. the temperature measuring in °C was selected, 0°C respectively 0.0°C can be chosen in the parameter level. Confirm the selection with [P] and the display switches back to menu level.</p>
	<p>Impedance matching, <i>OFFS</i>:</p> <p>The value for the sensor matching is adjusted from the smallest to the highest digit by [▼] [▲]. Confirm each digit with [P]. After the last digit the display switches back to the menu level. The value matching at a temperature measuring in °C can be adjusted between -20.0 and +20.0 and at a measuring in °F between -36.0 and +36.0. If the type of measurement is switched later on, the value is rounded.</p>

Menu level	Parameterisation level
	<p>Setting up the display time, SEC:</p> <p>  </p> <p>The measuring time is set with [▲] [▼]. The display moves up in increments of 0.1 sec up to 1 sec and in increments of 1.0 sec up to 10.0 seconds. Confirm the selection by pressing the [P] button. The display then switches back to the menu level again.</p>
	<p>Device undercut, DI.UND:</p> <p>  </p> <p>With this function the device undercut (_____) can be defined on a definite value.</p>
	<p>Display overflow, DI.DUE:</p> <p>  </p> <p>With this function the display overflow (_____) can be defined on a definite value.</p>
	<p>Back to menu group level, RET:</p> <p>With [P] the selection is confirmed and the device changes into menu group level „-FCT-“.</p>

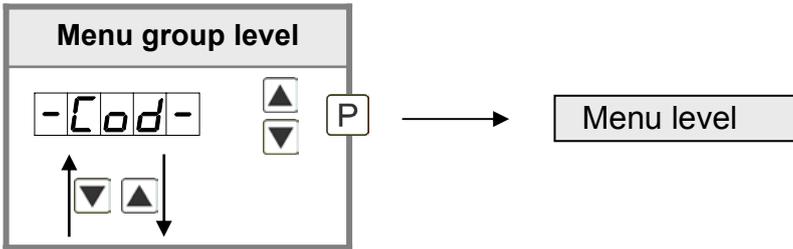

4.3.2. General device parameters

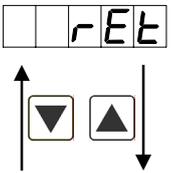

Menu level	Parameterisation level
<p>di .SEC P</p> <p>↑ ↓</p>	<p>Display time, <i>DISEC</i>:</p> <p>00.1 ▲ ▼ then 0.10 ▲ ▼ 10.0 P</p> <p>The display is set up with [▲] [▼]. Thereby you jump until 1 second in 0.1 steps and until 10.0 seconds in 1.0-steps. With [P] the selection is confirmed and the device changes into menu level.</p>
<p>round P</p> <p>↑ ↓</p>	<p>Rounding of display values, <i>ROUND</i>:</p> <p>00001 ▲ ▼ 00005 ▲ ▼ 00010 ▲ ▼ 00050 P</p> <p>This function is for instable display values, where the display value is changed in 1-, 5-, 10- or 50-steps. This does not affect the resolution of the optional outputs. With [P] the selection is confirmed and the device changes into menu level.</p>
<p>di SPL P</p> <p>↑ ↓</p>	<p>Display, <i>DISPL</i>:</p> <p>ActuaR ▲ ▼ MinUR ▲ ▼ MaxUR ▲ ▼ Hold P</p> <p>With this function the current measuring value, the Min-/Max value or the process-controlled Hold-value can be assigned to the display. With [P] the selection is confirmed and the device changes into menu level.</p>
<p>FLASH P</p> <p>↑ ↓</p>	<p>Display flashing, <i>FLASH</i>:</p> <p>no ▲ ▼ AL-1 ▲ ▼ AL-2 ▲ ▼ AL12 ▲ ▼</p> <p>AL-3 ▲ ▼ AL-4 ▲ ▼ AL34 ▲ ▼ ALAL P</p> <p>A display flashing can be added as additional alarm function either to single or to a combination of off-limit condition. With <i>no</i>, no flashing is allocated.</p>

Menu level	Parameterisation level
	<p>Assignment (deposit) of key functions, TAST:</p> <p>      </p> <p>For the operation mode, special functions can be deposited on the navigation keys [▲] [▼], in particular this function is made for devices in housing size 48x24 mm which do not have a 4th ([O]-key). If the MIN-/MAX-memory is activated with <i>EHTR</i>, all measured MIN/MAX-values are saved during operation and can be recalled via the navigation keys. The values get lost by re-start of the device. If the threshold value correction <i>LI.12</i> or <i>LI.34</i> is chosen, the values of the threshold can be changed during operation without disturbing the operating procedure. If <i>NO</i> is selected, the navigation keys are without any function in the operation mode.</p>
	<p>Special function [O]-key, TAST.4:</p> <p>     </p> <p>   </p> <p>For the operation mode, special functions can be deposited on the [O]-Taste. This function is activated by pressing the key. <i>SET.OF</i> adds a defined value to the currently displayed value. <i>EHTR.E</i> deletes the MIN/MAX-memory. If <i>HOLD</i> has been selected, the moment can be hold constant by pressing the [O]-key, and is updated by releasing the key. Advice: <i>HOLD</i> is activated only, if <i>HOLD</i> is selected under parameter <i>DISPL</i>. <i>ACTUR</i> shows the measuring value for approx. 7 seconds, after this the device jumps back on the parametrised display value. If <i>NO</i> is selected, the [O]-key is without any function in the operation mode.</p>
	<p>Back to menu group level, RET:</p> <p>  </p> <p>With [P] the selection is confirmed and the device changes into menu group level „- FCT -“.</p>

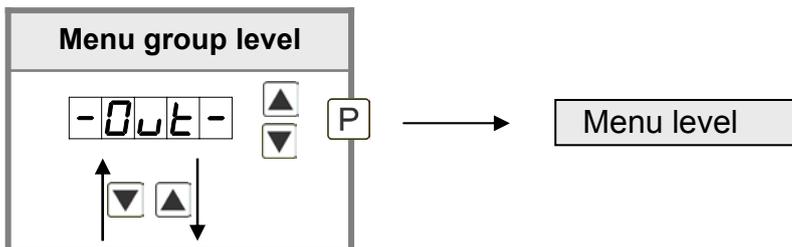

4.3.3. Safety parameters

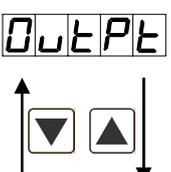

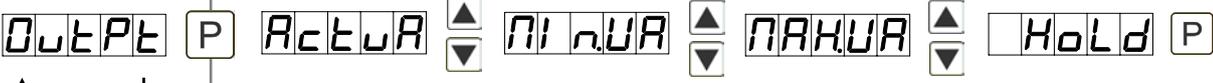

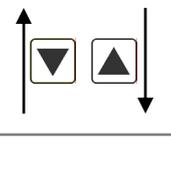

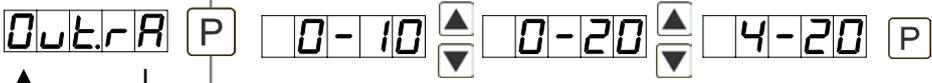

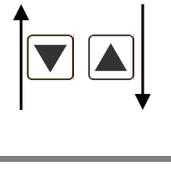

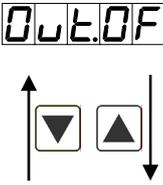

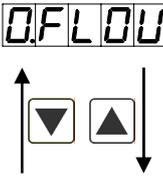

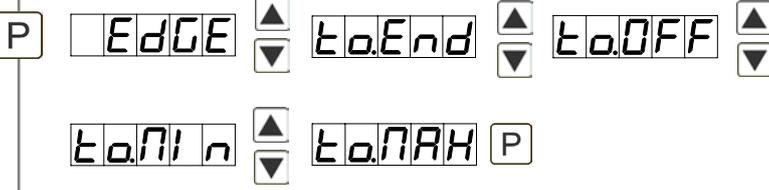

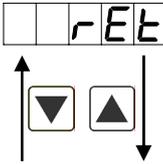

Menu level	Parameterisation level
	<p>User code, <i>U.CODE</i>:</p> <p><i>U.CoDE</i> P 0 P 0 P 0 P 0 P</p> <p>Via this code reduced sets of parameter can be set free. A change of the <i>U.CODE</i> can be done via the correct input of the <i>R.CODE</i> (master code).</p>
	<p>Master code, <i>R.CODE</i>:</p> <p><i>R.CoDE</i> P 1 P 2 P 3 P 4 P</p> <p>By entering <i>R.CODE</i> the device will be unlocked and all parameters are released.</p>
	<p>Release/lock analog output parameters, <i>OUT.LE</i>:</p> <p><i>OUT.LE</i> P no EN-OF OUT.EO ALL P</p> <p>Analog output parameters can be locked or released for the user:</p> <ul style="list-style-type: none"> - At <i>EN-OF</i> the initial or final value can be changed in operation mode. - At <i>OUT.EO</i> the output signal can be changed from e.g. 0-20mA to 4-20mA or 0-10VDC. - At <i>ALL</i> analog output parameters are released. - At <i>NO</i> all analog output parameters are locked.
	<p>Release/lock alarm parameters, <i>AL.LEU</i>:</p> <p><i>AL.LEU</i> P no LIMIT ALRM.L ALL P</p> <p>This parameter describes the user release/user lock of the alarm.</p> <ul style="list-style-type: none"> - <i>LIMIT</i>, here only the range of value of the threshold values 1-4 can be changed. - <i>ALRM.L</i>, here the range of value and the alarm trigger can be changed. - <i>ALL</i>, all alarm parameters are released. - <i>NO</i>, all alarm parameters are locked.

Menu level	Parameterisation level
	<p>Back to menu group level, <i>RET</i>:</p> <p>With [P] the selection is confirmed and the device changes into menu group level „- <i>FCT</i> -“.</p>

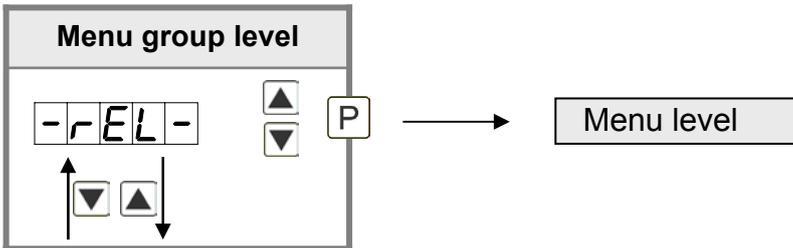

4.3.4. Analog output parameters

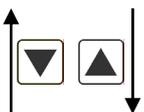

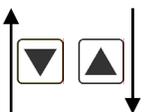

Menu level	Parameterisation level
	<p>Select reference analog output, <i>OUTPT</i>:</p> <p>  </p> <p>The analog output signal can refer to different functions, in detail this are the current measurand, Min-value or Max-value. If <i>HOLD</i> is selected the signal of the analog output will be hold and processed just after deactivation of <i>HOLD</i>. With [P] the selection is confirmed and the device changes into menu level.</p>
	<p>Select analog output, <i>OUT.RA</i>:</p> <p>  </p> <p>There are 3 output signals available: 0-10 VDC, 0-20 mA and 4-20 mA. With this function the demanded signal can be selected.</p>
	<p>Setting up the initial value of the analog output, <i>OUT.OF</i>:</p> <p>  </p> <p>The initial value can be adjusted from the smallest to the highest digit with [▲] [▼]. Confirm each digit with [P]. A minus sign can only be parametrized on the highest value digit. After the last digit, the display switches back to the menu level.</p>

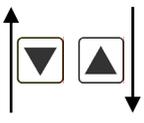

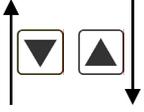

Menu level	Parameterisation level
	<p>Setting up the initial value of the analog output, <i>OUT.OF</i>:</p> <p></p> <p>The initial value can be adjusted from the smallest to the highest digit with [▲] [▼]. Confirm each digit with [P]. A minus sign can only be parametrized on the highest value digit. After the last digit, the display switches back to the menu level.</p>
	<p>Overflow behavior, <i>O.FLOU</i>:</p> <p></p> <p>To recognise and evaluate faulty signals, e.g. by a controller, the overflow behaviour of the analog output can be defined. As overflow can be seen either <i>EDGE</i>, that means the analog output runs on the set limits e.g. 4 and 20 mA, or <i>TO.OFF</i> (input value smaller than initial value, analog output jumps on e.g. 4 mA), <i>TO.END</i> (higher than final value, analog output jumps on e.g. 20 mA). If <i>TO.MIN</i> or <i>TO.MAX</i> is set, the analog output jumps on the smallest or highest possible binary value. This means that values of e.g. 0 mA, 0 VDC or values higher than 20 mA or 10 VDC can be reached. With [P] the selection is confirmed and the device changes into menu level.</p>
	<p>Back to menu group level, <i>RET</i>:</p> <p>With [P] the selection is confirmed and the device changes into menu group level „- OUT -“.</p>

4.3.5. Relay functions

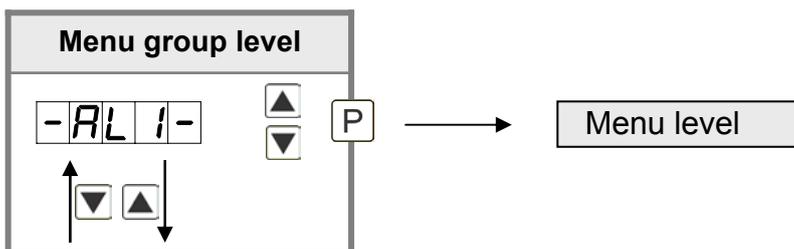

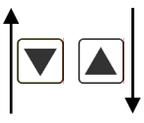

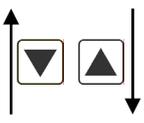

Menu level	Parameterisation level												
rEL-1 P 	<p>Alerting relay 1, REL-1:</p> AL-1 ... AL-4 AL-n1 ... AL-n4 LOGIC OFF On P												
	<p>Each setpoint (optional) can be linked up via 4 alarms (by default). This can either be inserted at activated alarms <i>AL1/4</i> or de-activated alarms <i>ALN1/4</i>. If <i>LOGIC</i> is selected, logical links are available in the menu level <i>LOG-1</i> and <i>COM-1</i>. One can only get to these two menu levels via <i>LOGIC</i>, at all other selected functions, these two parameters are overleaped. Via <i>ON/OFF</i> the setpoints can be activated/de-activated, in this case the output and the setpoint display are set/not set on the front of the device. With [P] the selection is confirmed and the device changes into menu level.</p>												
LOG-1 P 	<p>Logic relay 1, LOG-1</p> or nor And nAnd P												
	<p>Here, the switching behavior of the relay is defined via a logic link, the following schema describes these functions with inclusion of <i>AL-1</i> and <i>AL-2</i>:</p> <table border="1"> <tbody> <tr> <td>or</td> <td>$A1 \vee A2$</td> <td>As soon as a selected alarm is activated, the relay operates. Equates to operating current principle.</td> </tr> <tr> <td>nor</td> <td>$\overline{A1 \vee A2} = \overline{A1} \wedge \overline{A2}$</td> <td>The relay operates only, if no selected alarm is active. Equates to quiescent current principle.</td> </tr> <tr> <td>And</td> <td>$A1 \wedge A2$</td> <td>The relay operates only, if all selected alarms are active.</td> </tr> <tr> <td>nAnd</td> <td>$\overline{A1 \wedge A2} = \overline{A1} \vee \overline{A2}$</td> <td>As soon as a selected alarm is not activated, the relay operates.</td> </tr> </tbody> </table> <p>With [P] the selection is confirmed and the device changes into menu level.</p>	or	$A1 \vee A2$	As soon as a selected alarm is activated, the relay operates. Equates to operating current principle.	nor	$\overline{A1 \vee A2} = \overline{A1} \wedge \overline{A2}$	The relay operates only, if no selected alarm is active. Equates to quiescent current principle.	And	$A1 \wedge A2$	The relay operates only, if all selected alarms are active.	nAnd	$\overline{A1 \wedge A2} = \overline{A1} \vee \overline{A2}$	As soon as a selected alarm is not activated, the relay operates.
or	$A1 \vee A2$	As soon as a selected alarm is activated, the relay operates. Equates to operating current principle.											
nor	$\overline{A1 \vee A2} = \overline{A1} \wedge \overline{A2}$	The relay operates only, if no selected alarm is active. Equates to quiescent current principle.											
And	$A1 \wedge A2$	The relay operates only, if all selected alarms are active.											
nAnd	$\overline{A1 \wedge A2} = \overline{A1} \vee \overline{A2}$	As soon as a selected alarm is not activated, the relay operates.											

Menu level	Parameterisation level												
	<p>Alarms for relay 1, COM-1:</p> <p>COM-1 [P] AL-1 [▲] [▼] AL-2 [▲] [▼] AL-1234 [P]</p> <p>The allocation of the alarms to relay 1 happens via this parameter, one alarm or a group of alarms can be chosen. With [P] the selection is confirmed and the devices changes into menu level.</p>												
	<p>Alerting relay 2, REL-2:</p> <p>REL-2 [P] AL-1 AL-4 [▲] [▼]</p> <p>AL-n1 AL-n4 [▲] [▼]</p> <p>LOGIC [▲] [▼] OFF [▲] [▼] On [P]</p> <p>Each setpoint (optional) can be linked up via 4 alarms (by default). This can either be inserted at activated alarms <i>AL1/4</i> or de-activated alarms <i>ALN1/4</i>. If <i>LOGIC</i> is selected, logical links are available in the menu level <i>LOG-1</i> and <i>COM-1</i>. One can only get to these two menu levels via <i>LOGIC</i>, at all other selected functions, these two parameters are overleaped. Via <i>ON/OFF</i> the setpoints can be activated/de-activated, in this case the output and the setpoint display are set/not set on the front of the device. With [P] the selection is confirmed and the device changes into menu level.</p>												
	<p>Logic relay 2, LOG-2:</p> <p>LOG-2 [P] or [▲] [▼] nor [▲] [▼] And [▲] [▼] nAnd [P]</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 15%; text-align: center;">or</td> <td style="width: 35%;">$A1 \vee A2$</td> <td style="width: 50%;">As soon as a selected alarm is activated, the relay operates. Menu level	Parameterisation level
	<p>Alarms for relay 2, COM-2:</p> <p>COM-2 P A.1 A.2 ... A.1234 P</p> <p>The allocation of the alarms to relay 2 happens via this parameter, one alarm or a group of alarms can be chosen. With [P] the selection is confirmed and the device changes into menu level.</p>
	<p>Back to menu group level, RET:</p> <p>RET</p> <p>With [P] the selection is confirmed and the device changes into menu group level „-REL-“.</p>

4.3.6. Alarm parameters

Menu level	Parameterisation level
	<p>Dependency alarm1, ALRM.1:</p> <p>ALRM.1 P Actua MINUA MAXUA Hold P</p> <p>The dependency of alarm 1 can be related to special functions, in detail these are the current measurand, the MIN-value or the MAX-value. If HOLD is selected, then the alarm is hold and processed just after deactivation of HOLD. ENTER causes the dependency either by pressing the [O]-key on the front of the housing or by an external signal via the digital input. With [P] the selection is confirmed and the device changes into menu level.</p>
	<p>Threshold values / limit values, LI-1:</p> <p>LI-1 P 0 P 0 P 0 P 0 P 0 P</p> <p>For both limit values, two different values can be parameterized. With this, the parameters for each limit value are called up one after another.</p>

4.3.7. Programming lock, *RUN*:

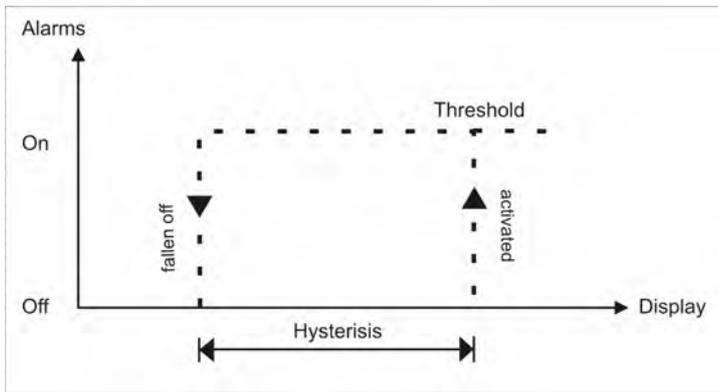

Description see page 9, menu level *RUN*

4.4. Alarms / Relays

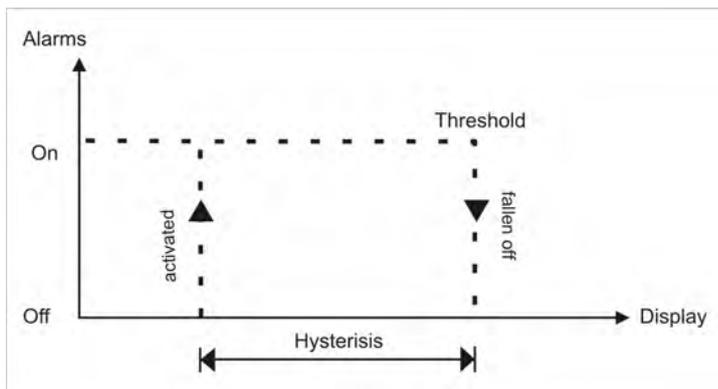

This device has 4 virtual alarms that can monitor one limit value in regard of an undercut or exceedance. Each alarm can be allocated to an optional relay output S1-S2; furthermore alarms can be controlled by events like e.g. Hold or Min-/Max-value.

Function principle of alarms / relays	
Alarm / Relay x	Deactivated, instantaneous value, Min-/Max-value, Hold-value, totaliser value
Switching threshold	Threshold / limit value of the change-over
Hysteresis	Broadness of the window between the switching thresholds
Working principle	Operating strom / Quiescent current

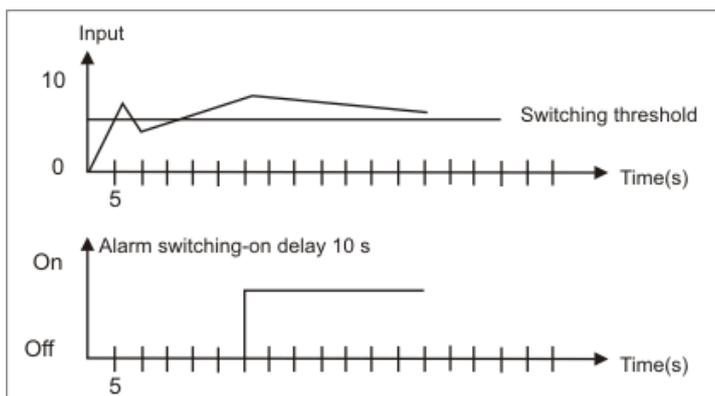

Operating current

By operating current the alarm S1-S2 is off below the threshold and on on reaching the threshold.

Quiescent current

By quiescent current the alarm S1-S2 is on below the threshold and switched off on reaching the threshold.

Switching-on delay

The switching-on delay is activated via an alarm and e.g. switched 10 seconds after reaching the switching threshold, a short-term exceedance of the switching value does not cause an alarm, respectively does not cause a switching operation of the relay. The switching-off delay operates in the same way, keeps the alarm / the relay switched longer for the parametrised time.

5. Factory settings

5.1. Default values

Standard parametrisation (flat operation level)

Parameter	Menu items					Default values
Unit	°C	°F				°C
Decimal point	0	0.0	0°C or 0°F	0.0°C or 0.0°F		0.0
Impedance matching	19999	to	99999			0.0
Measuring time	0.1 seconds	to	10.0 seconds			1.0 seconds
Analog output range	0...10 V	0...20 mA	4...20 mA			4...20 mA
Analog output final value	19999	to	99999			850.0
Analog output initial value	19999	to	99999			-2000.0
Limit value 1	19999	to	99999			2000.0
Hysteresis 1	00000	to	99999			0.0
Operation type 1	Undercut	Exceedance				Exceedance
Limit value 2	19999	to	99999			3000.0
Hysteresis 2	00000	to	99999			0.0

5.2. Reset to default values

To return the unit to a **defined basic state**, a reset can be carried out to the default values.

The following procedure should be used:

- Switch off the power supply
- Press button **[P]**
- Switch on voltage supply and press **[P]**-button until „- - - -“ is shown in the display.

With reset, the default values of the program table are loaded and used for subsequent operation. This puts the unit back to the state in which it was supplied.

Caution! All application-related data are lost.

6. Technical data

Housing			
Dimensions	96x48x70 mm (BxHxD)		
	96x48x89 mm (BxHxD) incl. plug-in terminal		
Panel cut-out	92.0 ^{+0.8} x 45.0 ^{+0.6} mm		
Wall thickness	up to 3 mm		
Fixing	screw elements		
Material	PC Polycarbonate, black, UL94V-0		
Sealing material	EPDM, 65 Shore, black		
Protection class	standard IP65 (front), IP00 (back side)		
Weight	approx. 200 g		
Connection	plug-in terminal; wire cross section up to 2.5 mm ²		
Display			
Digit height	14 mm		
Segment colour	Red (optional green, yellow or blue)		
Range of display	-19999 to 99999		
Setpoints	one LED per setpoint		
Overflow	horizontal bars at the top		
Underflow	horizontal bars at the bottom		
Display time	0.1 to 10.0 seconds		
Input	Measuring range	Measuring fault	Digit
PT100 2-Leiter	-200.0...-850.0°C	0.1 % of measuring range	±1
Temperature drift	100 ppm / K		
Mesuring time	0.1...10.0 seconds		
Measuring principle	U/F-conversion		
Resolution	0,1°C or 0,1°F		
Output			
Analog output	0/4-20 mA or 0-10 VDC 16 Bit reversible		
Switching output			
Relay with change-over contacts	250 VAC / 5 AAC; 30 VDC / 5 ADC		
Switching cycles	30 x 10 ³ at 5 AAC, 5 ADC ohm resistive load		
	10 x 10 ⁶ mechanically		
	Diversity according to DIN EN50178		
	/ Characteristics according to DIN EN60255		
Power supply	230 VAC +/- 10 % max. 10 VA		
	10-30 VDC galv. insulated, max. 4 VA		

Memory	EEPROM
Data life	≥ 100 years
Ambient conditions	
Working temperature	0...50°C
Storing temperature	-20...80°C
Climatic density	relative humidity 0-80% on years average without dew
EMV	EN 61326
CE-sign	Conformity to directive 2004/108/EG
Safety standard	EN 61010; EN 60664-1

7. Safety advices

Please read the following safety advice and the assembly *chapter 1* before installation and keep it for future reference.

Proper use

The **M2-device** is designed for the evaluation and display of PT100 signals.

Danger! Careless use or improper operation can result in personal injury and/or damage to the equipment.

Control of the device

The panel meters are checked before dispatch and sent out in perfect condition. Should there be any visible damage, we recommend close examination of the packaging. Please inform the supplier immediately of any damage.

Installation

The **M2-device** must be installed by a suitably **qualified specialist** (e.g. with a qualification in industrial electronics).

Notes on installation

- There must be no magnetic or electric fields in the vicinity of the device, e.g. due to transformers, mobile phones or electrostatic discharge.
- The **fuse rating** of the supply voltage should not exceed a value of **6A N.B. fuse**.
- Do not install **inductive consumers** (relays, solenoid valves etc.) near the device and **suppress** any interference with the aid of RC spark extinguishing combinations or free-wheeling diodes.
- Keep input, output and supply lines separate from one another and do not lay them parallel with each other. Position “go” and “return lines” next to one another. Where possible use twisted pair. So, you receive best measuring results.
- Screen off and twist sensor lines. Do not lay current-carrying lines in the vicinity. Connect the **screening on one side** on a suitable potential equaliser (normally signal ground).
- The device is not suitable for installation in areas where there is a risk of explosion.
- Any electrical connection deviating from the connection diagram can endanger human life and/or can destroy the equipment.
- The terminal area of the devices is part of the service. Here electrostatic discharge needs to be avoided. Attention! High voltages can cause dangerous body currents.
- Galvanic insulated potentials within one complex need to be placed on a appropriate point (normally earth or machines ground). So, a lower disturbance sensibility against impacted energy can be reached and dangerous potentials, that can occur on long lines or due to faulty wiring, can be avoided.

8. Error elimination

	Error description	Measures
1.	<p>The unit permanently indicates overflow.</p> 	<ul style="list-style-type: none"> • The input has a very high measurement, check the measuring circuit. • With a selected input with a low voltage signal, it is only connected on one side or the input is open. • Not all of the activated setpoints are parameterised. Check if the relevant parameter are adjusted correctly.
2.	<p>The unit permanently shows underflow.</p> 	<ul style="list-style-type: none"> • The input has a very low measurement, check the measuring circuit . • With a selected input with a low voltage signal, it is only connected on one side or the input is open. • Not all of the activated setpoints are parameterised. Check if the relevant parameter are adjusted correctly.
3.	<p>The word "HELP" lights up in the 7-segment display.</p>	<ul style="list-style-type: none"> • The unit has found an error in the configuration memory. Perform a reset on the default values and re-configure the unit according to your application.
4.	<p>Program numbers for parameterising of the input are not accessible.</p>	<ul style="list-style-type: none"> • Programming lock is activated • Enter correct code
5.	<p>"ERR1" lights up in the 7-segment display</p>	<ul style="list-style-type: none"> • Please contact the manufacturer if errors of this kind occur.
6.	<p>The device does not react as expected.</p>	<ul style="list-style-type: none"> • If you are not sure if the device has been parameterised before, then follow the steps as written in <i>chapter 5.2.</i> and set it back to its delivery status.
